

## **ABOUT US**

We are a leading Hardware Software and Network Solutions company, bringing together various technologies from world leaders to meet the IT networking, Microsoft Licensing, Cloud implementation (Microsoft Azure) and communication infrastructure needs of distributed Enterprises.

TEK2OPEN SOLUTIONS PVT.LTD has strong industry certified design and implementation team, turnkey project management skills, ability to transform customer needs into actions, highly dedicated professional and motivated team have been the key factors in building an ever-growing list of satisfied customers.

## **TEK2OPEN SOLUTIONS PVT. LTD.**

TEK2OPEN SOLUTIONS PVT.LTD. Maintain a positive Customer image and attract new clients, we understand client's corporate responsibilities to their end customers.

We are responsible for providing some of the most seamlessly project management skills in IT networking, Licensing, audio-visual, integrated security and automation. We believe that integration and customization are the keys to provide our clients with right technical support.

What we have on offer is a personalized and uncomplicated service that will get you what you want in the simplest way possible.

# OUR VISION & MISSION

**“DELIVERING INDEPENDENT, INNOVATIVE AND INTELLIGENT SERVICE TO OUR CLIENT.”**

## PROJECT MANAGEMENT

**Our team is Discipline enough** and well trained to initiate, plan, execute, control and achieve specific goals and meet success criteria.

**Our Goals:-**

**Facility Management**

**Assessment Management**

**Backup Management**

# INSTALLATION

Planning and Procuring of equipment is only one half of what we do. Our engineers come with years of experience in understanding low voltage systems and the proper installation of equipment. This step is crucial to the effectiveness of the entire exercise, as a well installed and efficiently integrated system that drastically reduces the upkeep and maintenance involved in running effective premises.

# INTEGRATION

Procuring equipment and installation often leaves a client with multiple systems to manage and maintain. Complicated and unnecessary equipment often cause just as much damage to a client as a lack of proper technology. Proper integration of IT Networks, Maintenance, and Security systems translate to a systematically accessible data which reduces time spent on administrative tasks and drastically increases the time spent on practical tasks.

We here at TEK2OPEN specialize in integrating and creating a uniform access system through minimal personnel. It controls multiple access points, maintenance and resource management systems, and other safety and

Security devices at the same time. This integration of multiple systems makes it simpler for personnel to take action immediately.

And what does integration mean to our clients? Networking, security and maintenance integration can be translated to optimal usage of manpower, higher degree of control over surveillance and access control, optimized flow of information, and finally, a substantial reduction in budget.

## **MAINTENANCE**

Properly installed and managed integrated networks and building management systems require minimal maintenance. Our technicians at TEK2OPEN not only help install and train the staff involved in the proper usage of the management system, but are regularly in touch and available to the clients in case of any emergency.

We believe that our relationship with our customers does not end at the finish of a project but rather that our services should be easily accessible to them at all points; be it for clients who require assistance with hardware and software or clients who need support with maintenance and consultation assistance alone. Our dedication to constant interaction with our customer means regular and easy maintenance checks and periodical updates when required. We pride ourselves in being able to provide our services to our customers in aspects of their backend technology needs, be it Fire Detection or Alarm systems, Optical Fibre Cabling or Wi-Fi infrastructure.

# SAFETY & SECURITY

The age old saying, 'accidents don't tell and happen' is more applicable than ever in today's world; Planning and Prediction are the critical aspects of threat minimization. It is not possible by every organization or household to have large manpower taking care of risks; this not only provides an easy target for malicious activities but also for accidents beyond our control.

Safety and Security equipment like fire detection, alarm systems and CCTV systems to provide the amount of assistance required for every property caretaker, large-scale institutions like Universities, Industrial Complexes, Hospitals, Commercial Complexes and Shopping Malls. What we provide is a service that not only offers our clients appropriate hardware but also an option to customize the system according to need and integrate it with other surveillance and management systems.

**CCTV SURVEILANCE SYSTEM**

**ACCESS CONTROL**

**FIRE DTECTION & FIRE ALARM**

# HARDWARE MANAGEMENT

Network team manages the provisioning, deployment, testing and ongoing management of all customer's networking devices, including Routers, Switches, UTM, routing tables and links. To ensure maximum availability, we maintain an on-site inventory of network-related components.

## AUDIO & VISUAL

Getting one's voice heard is important in terms of spreading information as well as doing it on time. Personally being present at a location is not always possible, especially when industries, markets and even building complexes are exponentially larger than what they were a decade ago. The scale of things also brings about the problem of information getting lost or not arriving on time.

We provide appropriate communication methods for our clients, be it the small scale meeting atmosphere required for video conferencing, or giving information to a large number of people through PA Systems and Signage's.

**PUBLIC ADDRESS SYSTEM**

**DIGITAL SIGNAGES**

**VIDEO CONFERENCE**

# AUTOMATION

Home and Office automation has seen enormous leaps in terms of technology and usage in recent times. The combinations and uses of automation are endless and can be applied in varying degrees, be it to efficiently manage resources or to control access to certain areas remotely.

Automation in hotels and offices has seen a significant drop in the usage of natural resources and has helped maintain surveillance and a better management of footfall in restricted or sensitive areas.

## SUPPORT & SERVICES

- Superior support for priority IT equipment
- Focus on fast problem resolution
- Fix time service
- Ideal for IT-dependant organizations
- Ultimate level of protection for mission-critical IT systems
- Combines high level support with disaster recovery
- Improved business continuity and maximum uptime
- Premium support for your IT infrastructure
- Can include dedicated on-site support staff and bonded stock
